

# Demand Led Plant variety Design Workshop

**Ereck Chakauya**

SANBio Manager (Interim)

**Southern Africa Network for Biosciences (SANBio)**

Demand Led Plant variety Design Workshop

14-15 May 2014, Winsor Hotel, Nairobi

# SANBio – Platform for SADC countries networking in bioscience to solve Health and Nutrition challenges

- A network of 12 countries in the SADC region (Except Tanzania)
- A component of African biosciences Initiative (ABI) - an AU/NEPAD Initiative under S&T consolidated Plan of Action (CPA)
- SANBio Agenda is driven by National priorities, SADC STI policies and NEPAD STI policies (STISA)

# What and Whose Problem?

- Customers, owners, stakeholders and Users' needs and deliverables to meet these are seldom obvious

User Requirements (Needs)

Vs

Functional Requirements (breeding Traits)

# Priorities: Human Health

- Bioprospecting for remedies
- Diagnostics, e.g. point-of-care or surveillance
- Food drug interactions
- Food allergies
- Genomics, e.g. host-pathogen interactions

# Priorities in Nutrition

- [Alternative sources of proteins, micronutrients & carbohydrates](#), e.g., promotion of nutrient-rich foods targeting women & children
- [Food processing](#),
  - e.g. improved handling and storage,
  - technologies to ensure availability throughout the year
- Value addition of [indigenous foods](#) and [neglected](#) foods
- [Indigenous coping strategies to natural and man-made disasters – climate change, HIV/AIDS](#)
- Nutrition education

# DEMAND-LED CROP TRAIT DEVELOPMENT USING NON-GMO TECHNOLOGIES – EXAMPLES ON SORGHUM

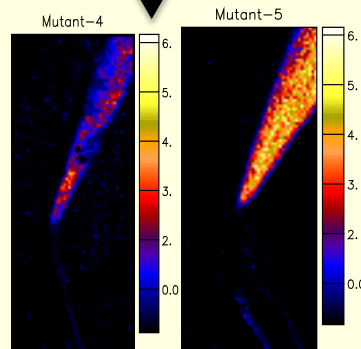

Versatile technology for  
Manipulation of any trait

Digestible  
Sorghum via GMO

Digestible  
sorghum via  
mutation breeding

Mutation breeding of micro  
algae: nutrition, food,  
bioactives, biofuels

Increased micronutrients  
(Fe) via mutation breeding

Mutation breeding in sorghum for  
photochemicals promoting health - anthocyanins

# Involve Users in the design

# Involve Stakeholders

## User Needs

Good yields  
Low price of seed  
Good nutrition value  
Tastes good  
Appeal to whole family  
Drought tolerant  
Convenient serving

## Functional Requirements

Cost of seed per unit  
% protein content  
Less than 120 days to maturity  
High water user efficiency

Thank you
